SUMMARY

Backend engineering student focused on building backend systems using **Node.js**, **PostgreSQL**, **Redis**, and **Docker**. Experienced with **REST APIs**, async job queues, cloud storage integrations, and backend workflows. Interested in backend infrastructure, distributed systems, and application architecture.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, SQL
Backend: Node.js, Express.js, Flask, REST API Design, JWT, bcrypt, RBAC
Async & Queues: BullMQ, Celery, Redis (Cache-Aside, TTL), Background Workers, Retry Logic
Databases: PostgreSQL, MySQL, MongoDB, Redis
DevOps & Infrastructure: Docker, Docker Compose, GitHub Actions (CI/CD), AWS S3, MinIO, Cloudinary
Monitoring & Docs: Prometheus, Grafana, Swagger/OpenAPI
Frontend: React, HTML, CSS

PROJECTS

CloudStash — Cloud File Storage System

May 2026 – Present

Node.js, PostgreSQL, Redis, BullMQ, Docker, AWS S3 | [Live Demo](#) | [GitHub](#)

- Built a backend file storage system with pluggable drivers for **AWS S3**, MinIO, and local disk so the storage provider can be swapped without changing application logic.
- Implemented S3 multipart upload with presigned URLs so large files are sent directly to object storage, bypassing the **REST API** server entirely.
- Set up a **Redis** cache-aside layer with TTL-based invalidation for file metadata queries, with **PostgreSQL** as the fallback on cache miss.
- Offloaded virus scanning and thumbnail generation to **BullMQ** async workers with retry logic and graceful shutdown handling.
- Added SHA-256 deduplication so duplicate files share the same blob across users, with per-user quota tracking.
- Instrumented with **Prometheus** metrics and **Grafana** dashboards. Dockerised with Compose and GitHub Actions CI/CD.

Job Evaluation Platform

Apr 2026 – May 2026

Python, Flask, Redis, Celery, MySQL | [Live Demo](#) | [GitHub](#)

- Built a **REST API** backend in Flask using controllers, services, repositories, and validators to keep the codebase modular and maintainable.
- Designed a scoring engine that compares resumes against job descriptions across skills, experience, and keywords, returning a 0–100 score with a Hire, Improve, or Reject decision.
- Offloaded parsing and scoring to **Celery** background workers using **Redis** as the task broker, so the API stays responsive even during heavy processing jobs.
- Applied **Redis** TTL caching so repeated requests for the same resume-JD pair skip reprocessing entirely. Secured endpoints with bcrypt hashing and Pydantic v2 input validation.

EDUCATION

GH Rasoni College of Engineering & Management

B.Tech in Information Technology | *CGPA: 8.06 / 10*

Pune, Maharashtra

Expected June 2027

ADDITIONAL

DSA: Solved problems in Java across arrays, hashing, two pointers, and sliding window on LeetCode and GeeksforGeeks.

Hackathons: Top 10 team in Smart India Hackathon (SIH) 2024.

Leadership: Design Lead, GeeksforGeeks GHRCEM Chapter (2024–2025).

GitHub: Active project repositories with documented commit history and README documentation.
