SUMMARY

Full Stack Developer with a strong backend foundation, building production-grade REST APIs using Node.js, Express.js, Flask, and Python. Experienced in JWT authentication, RBAC, async task processing (Celery/Redis), MySQL schema design, and API performance optimization. Delivers complete full-stack applications with React frontends deployed on cloud platforms (Vercel, Render). Solved 100+ DSA problems in Java. Seeking a Backend or Full Stack Developer Internship.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, Java

Backend: Node.js, Express.js, Flask, REST API Design, JWT, bcrypt, Middleware, RBAC, Celery

Frontend: React, HTML, CSS

Databases: MySQL (Schema Design, Indexing, Query Optimization), MongoDB (Atlas), Redis (Caching, TTL)

Deployment & Tools: Vercel, Render, Git, GitHub, Postman, VS Code

Libraries & APIs: Google Gemini API, Pydantic v2, NLP, Resume Parsing

PROJECTS

AI Resume Analyzer | *Python, Flask, React, MySQL, Redis, Celery, Gemini AI* | [Live Demo](#) | [GitHub](#) Mar 2025 – Present

- Built a full-stack AI resume analysis platform using Flask REST APIs with clean architecture (controllers, services, repositories, validators) and a React frontend.

- Designed a weighted evaluation engine that scores resumes against job descriptions across skills match, experience relevance, and keyword coverage — producing a 0–100 score with Hire / Improve / Reject recommendations.

- Integrated Google Gemini API to generate structured, per-JD resume improvement suggestions and actionable candidate feedback.

- Offloaded resume parsing and evaluation to Celery + Redis background workers, decoupling heavy processing from API request cycles.

- Applied Redis TTL caching to reduce redundant processing; stored structured results in MySQL with indexed schema; secured APIs with bcrypt and Pydantic v2 validation.

SkillMatch | *Node.js, Express.js, MongoDB Atlas, JWT, React* | [Live Demo](#) | [GitHub](#) Jan 2025 – Present

- Built a full-stack job platform with custom skill-overlap scoring; REST APIs handle registration, job posting, and application tracking with JWT-based RBAC across candidate, employer, and admin roles.

- Implemented skill-match scoring using referenced MongoDB collections; compound indexes prevent duplicate applications at the database level.

- Managed application lifecycle (applied → shortlisted → rejected) via server-side status validation middleware; deployed React frontend on Vercel and Express backend on Render.

- Structured role-based middleware guards across all Express routes, ensuring each user type accesses only permitted endpoints.

WanderLust | *Node.js, Express.js, MongoDB* Jan 2025 – Present

- Built REST APIs for a property listing and booking system with isolated RBAC for host and guest users.

- Designed MongoDB schemas with referential integrity across users, listings, and bookings; enforced input validation and consistent error handling at every route.

- Applied ownership checks on listing update and delete routes — only the creating host can modify their own records.

EDUCATION

GH Rasoni College of Engineering & Management

B.Tech in Information Technology | CGPA: 8.13 / 10

Pune, Maharashtra

Expected June 2027

LEADERSHIP

Design Lead

2024 – 2025

GeeksforGeeks GHRCEM Chapter

- Led the design team for the college's GeeksforGeeks chapter, overseeing visual output for events, workshops, and community initiatives.

- Designed social media creatives and promotional assets, maintaining consistent branding across all chapter communications.

ADDITIONAL

DSA: Solved 100+ problems in Java — arrays, hashing, two pointers, sliding window, strings.

Certification: Microsoft Azure Fundamentals (AZ-900) — coursework completed, exam scheduled.

Open Source: All projects on GitHub with documented commit history and READMEs.
